## PROJECTS

TrueTube | *(React, Redux, Rails, PostgreSQL, AWS S3, Sass, Webpack, Heroku)*

[Live](#) | [GitHub](#)

- Remotely stored uploaded videos using Amazon Web Services S3 (AWS), reducing server load and improving scalability.
- Integrated Redux with HTML5 media web components to create customized media playback for users.
- Leveraged Rails polymorphic associations to reduce PostgreSQL tables by 25%.
- Ensured user privacy and autonomy through frontend / backend authentication measures and with React Router, allowing users to only access and make changes to their videos and comments when logged in.

Tricks.css | *(JavaScript, HTML, CSS, Sass, Webpack)*

[Live](#) | [GitHub](#)

- Constructed a DOM manipulation algorithm to render the correct elements, dependent on scrolls or clicks.
- Designed UI using HTML5 and CSS3 including sliding index items and toggle buttons that react to mouse hovers.
- Used observer pattern to handle the management of global Z-indexes for overlapping items.

Deconstructed | *(MongoDB, Mongoose, Express.js, React, Redux, Node.js, React Google Charts)*

[Live](#) | [GitHub](#)

- Utilized JavaScript promises to fetch and store data asynchronously, allowing users to save tasks autonomously.
- Prevented unnecessary Axios requests by bootstrapping data and creating cookies, resulting in optimized user functionality to create a seamless application
- Implemented Local Strategy for user authentication with Passport.js, using BCrypt for password hashing, to secure the backend from malicious use of user's information.
